» Rear loads are ideal for areas with space constraints

» All Rear loads are nestable providing significant freight advantages

» The smaller units (1-4yard) have casters for added mobility

» Rear load containers allow haulers to combine commercial container routes and residential cart routes
Rear Load Containers

Rear load containers are designed for use in cities, alleyways and other areas where space is tight. These rugged containers are manufactured using heavy gauge steel and solid steel trunnion bars to withstand years of heavy, dense loads. All rear load containers are tapered for nestability, for more economical storage and shipping.

With multiple manufacturing and shipping locations, Wastequip can meet your needs for rear load containers throughout North America.

1) CONSTRUCTION:
- Wrap around corners with continuous welded seams provide superior strength
- Single-piece body wrap; no seams (1-3 yard models)
- High gauge triple formed channel surrounds container top and provides rigidity
- Full length caster channels provide additional strength
- Sides are tapered for easier dumping
- Drain plugs
- Primed inside and out and painted outside

2) LIDS
- High density polyethylene covers mounted to a sturdy steel frame with 1/2” steel rods swings away for easy dumping
- Covers are quick and easy to install

3) OPTIONS
- Striker boxes: protect the body during dumping (2 and 3 yard only)
- Manual lid locks
- Heavy duty structure
- Several color choices
- Front tow hook (4-8 yard without casters)
- Quick disconnect caster pads
- Winch Hook (1-2 yard)

A solid 1” steel back hook is welded to the back channel.

Polyethylene covers hinge on 1/2” solid steel rods which are in turn supported by heavy duty braces.

Heavy gauge, triple formed channel surrounds container top

Full-length wheel channel adds strength for wheel load and to container. Your choice of, four 6” swivel casters or 2 swivel/2 rigid casters

Container backs are reinforced with two channels for maximum strength (4-8 yard).

Solid 1 inch handles fit through container side walls, through a wrap-around triangle brace and are firmly welded in place (1-2 yard only).
